

We worked as a team and learned how to split up the task and work efficiently. The key lessons are as follows:

- 1. Team work**
- 2. Supporting other members**
- 3. Time management**
- 4. Tkinter modules**
- 5. Responsive GUI**
- 6. Real life efforts**
- 7. Exceptions handling, etc.**
- 8. Image Processing**
- 9. Modular coding**

We are extremely grateful to DC Sir for encouraging us in doing this project where we understood the main difference the skills for academic coding and that of real life GUI development.

Thank you to everyone who supported us.
